

Dos7

INDIVIDUAL SOW FEEDING SYSTEM

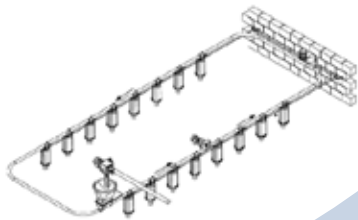

Dos7 individual feeding dispensers provide a low cost, easily operated, variable flat rate, feeding system for sows.

Manual Operation

The dispensers are easily opened utilising a handle which turns a tube running along the length of the line slowly opening the dispensers. This simple method can accommodate up to 100 dispensers per line.

Automatic Operation

A simple push button operation, a single motor installation on an automated system allows a maximum of 100 dispensers per row and 400 dispensers per system.

Benefits

- Low cost durable non corrosive components are supplied for easy assembly
- Variable capacity up to 7litres of pellets can be easily and accurately dispensed to suit different animals
- Clear Feed Scale marked to 100ml increments for accurate feed allocation
- Excellent feed flow resulting from conical shape smooth inner walls and asymmetrical discharge
- Pear shaped dump ball ensures all feed is easily dispensed from the feeder
- Transparent housing for quick inspection from all sides
- Easy access is gained via a large window for easy cleaning or to add individual medication
- Easy cleaning: The simple 'click' system makes removal for thorough cleaning quick and easy
- Personnel not associated with feeding time therefore able to move more freely amongst the animals
- Minimal maintenance: the polypropylene dispenser will give years of trouble free operation
